# **TOWARDS A HARMONISED ONSHORE POWER SUPPLY IN THE EUROPEAN UNION**

## **EALING Mid-Term Event**

**Online**

**29<sup>th</sup> April**

**10:00 a.m. – 1:00 p.m. CEST**

Emissions reduction at ship-port interface is one of the key drivers to reach the IMO 2030 and 2050 decarbonisation goals and to face the key challenges of the EU Green Deal: regulatory, technical, operational and economic actions to reduce GHG emissions are required to move towards a lower carbon future.

The establishment of a suitable framework based on EU and national legislations for an harmonised European approach to the Onshore Power Supply (Cold Ironing) is at the heart of EALING Action: during the event the results coming from the EALING Activity 1 "Harmonised framework for the electrification of participating TEN-T maritime ports", Activity 2 "Maritime fleet adaptation" and Activity 3 "Technical studies for the electrification infrastructure of the participating TEN-T maritime ports" will be deepen and discussed together with industry players involved in building a more competitive and sustainable TEN-T Maritime Network.
